

PERSONAL STATEMENT

I am a 24 year old Developer who loves everything that has to do with Web design & development, transforming customer and client needs into real and logical solutions, as well as constantly learning and refining ways to achieve things.

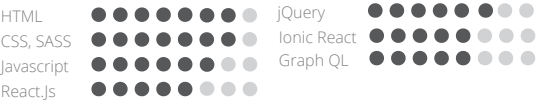

I have 4 years of web experience, 1 year working as a freelance Web Developer while I was completing my diploma in Software Development and 3 years of professional work experience working as a Junior Developer at Mr Price. At Mr Price I was placed in the Ecommerce team in their IT division and had been given the opportunity to work heavily in their Web Development department, mainly creating front-ends for their sites and applications using the latest in web technologies (React, Ionic, GraphQL). Apart from developing, I also looked after their existing non-trading sites which were hosted on Kentico and sharepoint, this included content updates as well as enhancements that the business may have needed.

MY SPECIALITIES
